Abstract

This study analyzes learner demographics and course enrollment behavior on the EduPro online learning platform. The objective is to understand learner preferences, enrollment patterns, and course popularity using exploratory data analysis techniques.

1. Introduction

Online learning platforms require a better understanding of learner demographics and enrollment behavior to improve educational planning and learner engagement.

2. Problem Statement

EduPro lacks detailed insights regarding learner demographics, enrollment patterns, course preferences, and learner behavior.

3. Objectives

Analyze learner demographics.

Study age-wise enrollment patterns.

Analyze gender participation.

Identify popular course categories.

4. Dataset Description

The dataset consists of:

Users Dataset

Courses Dataset

Transactions Dataset

5. Methodology

The project methodology includes:

Data Collection

Data Cleaning

Data Integration

Exploratory Data Analysis (EDA)

Data Visualization

6. Results and Findings

Young learners represent the largest user segment.

Gender participation is relatively balanced.

Beginner-level courses are highly preferred.

Some course categories receive significantly higher enrollments.

7. Recommendations

Increase beginner-level courses.

Expand popular course categories.

Improve learner engagement strategies.

Implement personalized educational recommendations.

8. Conclusion

The analysis provides valuable insights into learner demographics and enrollment behavior, enabling EduPro to make data-driven educational decisions.
